# HUMAID

## HUMANITARIAN TRADING TOKEN

A digital token that turns trading into real support for humanitarian work

A fixed share of token sale proceeds and of every trade is transferred **automatically** by the smart contract to the wallets of partner humanitarian organizations, with no intermediary, and verifiable by anyone on the blockchain.

| | | | |
|---|---|---|---|
| **40%** of sale proceeds to organizations | **50%** of trading fees to organizations | **5 yrs** founder share locked, publicly | **10M** max supply; unsold tokens burned |

## How it works

### 1. Purchase

Buyers pay in USDT or USDC on BNB Chain.

### 2. Automatic split

The contract sends 40% at once to a donation splitter that pays only organizations; 60% funds operations.

### 3. Ongoing trading

A 1% fee on each transfer; half goes to organizations in stablecoins.

## Token design

| | |
|---|---|
| **For sale (60%)** | 6M tokens in 3 phases, up to 2 months each; 6 months at most in total |
| **Purchase limits** | From $10, up to 50,000 tokens per person in each phase |
| **Sale price** | $0.10, then $0.15, then $0.20 per token |
| **Trading liquidity (10%)** | 1M tokens in 3 tranches, each locked for 1 year |
| **Founder share (30%)** | 3M tokens locked 5 years, then released over 36 months |
| **Unsold tokens** | Permanently burned at the end of each phase |

## Safeguards

- Donations go only to organizations' wallets; changes need 7 days' public notice
- No new minting; the fee can never be raised
- Published test report; contract code open on BscScan
- Public dashboard linking every donation on-chain

## Partner organization's role

- Funds go only to the organization, which decides delivery
- Earmarking for programs or countries through its own mechanisms
- Its name is used only with written consent

---

The project runs on public smart contracts; no launch date has been set. The token's price is not guaranteed and may rise or fall; it is not offered as an investment.
